## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 20, 21, and 24, drawn to a method and apparatus for measuring concentrations of water in a flow of an oil, gas, and water mixture comprising a pipe for conveying a flow of mixture, an excitation coil and a detection coil, classified in class 73, subclass 61.44.
  - II. Claims 22, 23, 25, and 26, drawn to a method and apparatus for measuring concentrations of water in a flow of an oil, gas, and water mixture comprising a pipe for conveying a flow of mixture, a pair of excitation coils and a detection coil between the excitation coils, classified in class 73, subclass 61.45.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated due to the fact that the operation of a device with two excitation coils would be completely different than a device with just one excitation coil. The two devices are patentably distinct from one another.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2856

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
